

## WATERWALL FATBOY 650G

Waterwall Designs creates modular rainwater storage tanks for contemporary homes. Innovative and modern in design, Waterwall products aim for maximum capacity, minimum footprint. Any number of tanks can be linked together for even greater storage.

Despite the name, the Fatboy tank has an excellent size-to-capacity ratio, holding 650 gallons whilst being only just over two feet wide.

Waterwall tanks are made to exacting standards - the high density UV stabilised polyethylene, coupled with dense compounded color, limits light entering the tank and prevents algae from growing in your tank water. Solid, thick walls prevent bulging when full, and keeps the tank strong during its many years of service.

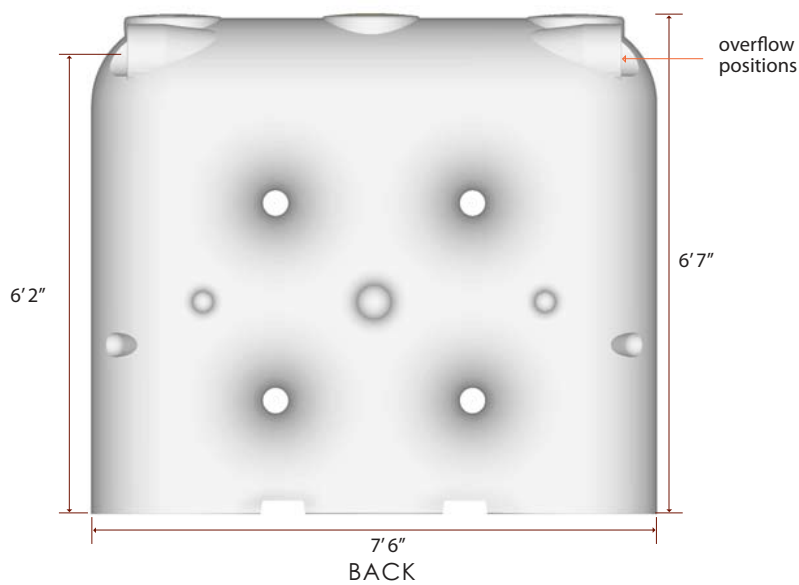

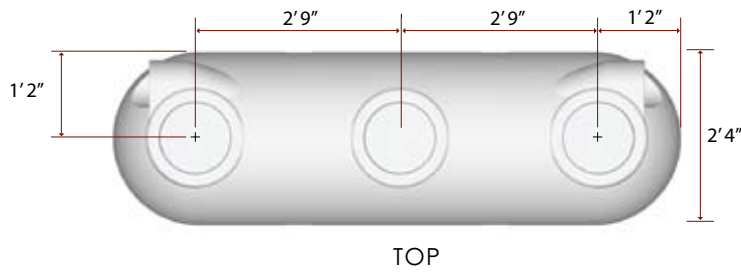

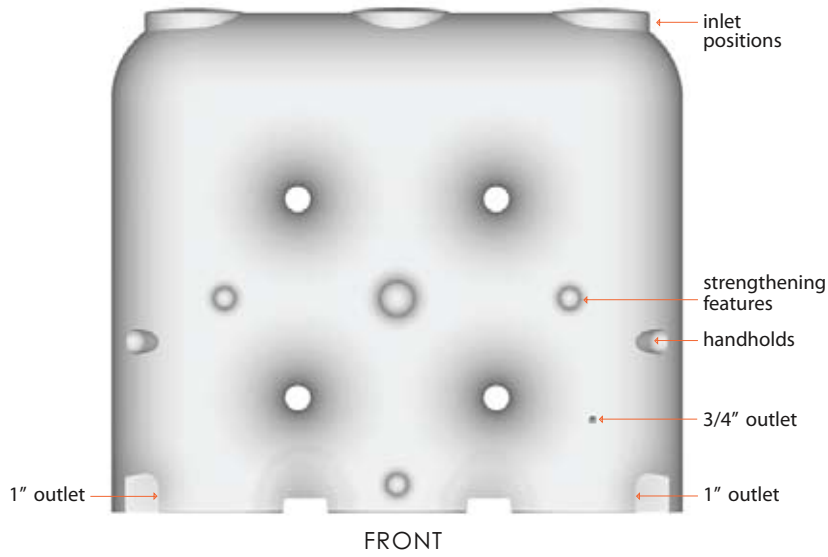

Our experienced distributors will be happy to answer all your rain harvesting questions - see our website.

Dimensions	7'6" long x 6' 7" high x 2' 4" deep
Capacity	650 gallons
Weight	220pd empty; 2.7 ton full
Inlet	Three inlet positions along the top of the tank; a 12" mosquito proof leaf strainer supplied.
Overflow	Overflow positions on either end of the tank; a 3" fitting supplied.
Outlets	Two brass threaded 1" tap outlets - one in each end of the tank - plus one 3/4" tap outlet at knee height on the front of the tank.
Footing	A level, solid base is all that is required for Waterwall Fatboy, such as cement pavers or a contained sand base.
Installation	Instructions are supplied with the tank, and can be downloaded at <a href="http://waterwalltanks.com">waterwalltanks.com</a>
